## Definire il Magnetismo

For sea di Coulomb 
$$= \frac{1}{c} = \kappa \cdot \frac{q_1 q_2}{d^2}$$

$$= \frac{1}{e} = \frac{F}{q}$$

$$= \frac{1}{e} \cdot \frac{q_m \cdot q_m}{d^2}$$

$$= F_m = K \cdot \frac{q_m \cdot q_m}{d^2}$$

$$-D \quad \mathcal{B} = \frac{\overline{F_m}}{q_m} = K \cdot \frac{q}{d^2} \quad \text{NON FUNZIONA!}$$

## 2) CARICA ELETRICA

Direzione: BUSSOLA

Verso: Da SUD -D NORD della bussola

MODULO: N < |B| · S

Numero
linee di
forta

$$= 0 \quad dN = B \cdot dS = \overline{D}_B \quad - 0 \quad \phi_B = \oint B \cdot \hat{n} \, dS$$
PER DEFINIZIONE
